

bellavista® ventilators

Ventilators for Homecare and Hospital

At this years MEDICA, imtmedical proudly presented the new bellavista product line. These melodious sounding ventilators were developed over three years in close collaboration with ventilation specialists and doctors.

bellavista's elegant design and outstanding technology are one of the many features that differentiate this product pallet from any other on the market. The trendsetting operating concept and the broad range of applications from homecare to hospital, including invasive and non-invasive ventilation for adults as well as children were also received with great enthusiasm by the specialists.

Revolutionary operation

bellavista's large touchscreen offers an innovative user experience. Whether a doctor, nurse or patient - every user views only relevant information on the screen. Irrelevant data and notices are blended out and only displayed when appropriate. Multiple additional features support easy-operation and reduce patient anxiety. This enables a noticeable increase in patient-ventilator compatibility and increases the chances of successful therapy.

World Premier in Diagnostics and Monitoring

bellavista is the first ventilator to provide reliable pneumological diagnosis where all patient information is collected using internal as well as external sensors. The collected data can easily be correlated and displayed and recorded using real-time curves, which can later be used for analysis purposes. The ArtefactFinder™ supports these analysis features.

MEDICA '07 in Retrospect

imtmedical - Hall 11 Stand D52

As the imtmedical organization continues to grow, so does our MEDICA platform. This year, we were able to discover new horizons by moving to the middle of hall 11 into a two-story stand.

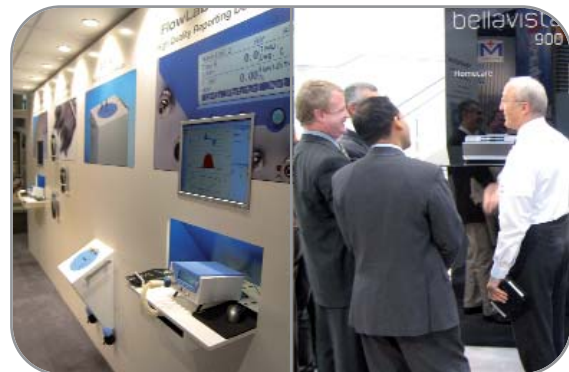

imtmedical's product highlight at MEDICA 07' was the introduction of bellavista - our ventilator product line for homecare and hospital use. Many visitors were able to view the hourly bellavista show, which provided an exciting introduction to the new ventilator product line. The amount of interest and positive feedback received from specialists was overwhelming - thank you!

imtmedical also presented a new member of our test lung family, the EasyLung and displayed the latest FlowLab features on several FlowAnalyser terminals.

Most importantly, we were able to meet with many of our customers from Europe, the Middle East, Asia and the Americas. Thank you for the interesting discussions and feedback!

The next stop on our exhibition schedule is Arab Health in Dubai, UAE from January 28th - 31st. We will be exhibiting for the second year in a row at the **Swiss Pavilion; stand 7H29**.

If you were not introduced to the bellavista ventilators at MEDICA, please stop by our booth at Arab Health for a product introduction. We look forward to greeting you in Dubai!
